

# PRODUCTION- AND FILLING PLANT

**Conception and construction of a distinct production- and filling plant, which leaves nothing to be desired.**

**This plant is one of the most advanced plants of current state and comprises the following main features:**

- 2 tallsilos for raw material up to 160 tons.
- 2 processing tanks with 2,000 liter content each, which makes possible a stage production of up to 18,000 liter.
- Fully automated plant with minimum personnel placement and therewith low production costs.
- Filling various container sizes from 1 to 1,000 liter (intermediate bulk container) is possible.
- By means of a fully automated control system we are able to save your desired formulation and produce it anytime with the same high standard. A product proceeding ensures you the safety that you become what you have ordered.
- All products that are conceived through AGROsolution are produced by this plant.
